Hi Anna-Karin,

I have had extensive communication with the National Board of Health and Welfare, right now several authorities are more concerned with showing that what I am describing has not been caused by that particular authority. I wrote to you because everyone must do what they can to correct this problem.

Dealing with a problem caused by incorrect guidelines or misinterpretation of them (in relation to Hallengren's statement on everyone's equal right to good care), becomes counterproductive in relation to correcting the basic problem.

I therefore hope that FHM accepts that the problem exists and that you do what you can to solve it quickly. We cannot accept that people are being killed casually while waiting for a comprehensive IVO investigation.

With kind regards

Hey!

Thank you for your e-mail. I have read and been impressed by what you write.

The National Board of Health and Welfare is the authority responsible for the issues you describe. Here is a link where you can find more information and contact routes:

<https://www.socialstyrelsen.se/coronavirus-covid-19/>

I realize that this is not exactly what you are asking for, but still suggest because older people for various reasons may feel anxiety and anxiety associated with covid-19 and corona:

As you probably already know, there are several organizations that offer support by phone, chat or email. Hit, e.g. to the Elderly Line, people can turn if they feel bad and need to talk about their anxiety or worry:

Good luck.

Sincerely
Anna-Karin Eriksson
Investigator
The Swedish Public Health Agency

Subject: Mental illness due to c19

Hello,
Only 13% of those who died of / with c19 have received hospital care. Many of the 87% who did not receive hospital care have died with palliative care at the end of life.
In several cases, relatives have interrupted palliative care at the end of life and brought about curative care with recovery as a result.
Patients with other diagnoses such as urinary tract infections and fractures have also been referred to palliative care at the end of life. This has been practiced all the way down to the age of 55.
The National Board of Health and Welfare says that their guidelines for de-prioritizing patients from curative care would not be used as long as care places existed (and they have existed all along).
Nevertheless, many regions have applied these triage rules, with the result that many have had to risk their lives unnecessarily.
This is contrary to Hallengren's repeated statements that everyone has an equal right to good care. I refer to regular hospital care with drip and oxygen, not to be confused with IVA.
People living in nursing homes and other care homes have been systematically denied hospital care, even after the c19 pandemic became milder in society.

As a result, many who are approaching retirement age or have already retired are living with a constant fear of death as they are fully aware that they will either be denied hospital care or that they will immediately receive palliative care in the final stages of life which then becomes active euthanasia = killing like a sick dog.
Constantly walking around with such anxiety leaves its mark in the form of mental illness and can also lead to people choosing to take their own lives.

As you work to combat mental illness, I ask that you do everything you can to GUARANTEE that these triage rules are never used as long as there are care places available. It would make life a lot easier for very many who have passed 55 to know that they will get the care they need even if they suffer from c19.

I understand that there are people who are so ill even before they get c 19 that they do not have the opportunity to survive c 19, but active euthanasia is forbidden in Sweden and must not be used. Absolutely not casual!

I can not finish this better than to attach what a woman wrote on Facebook. Read it and get an impression of it. I believe and hope that you can not help but act after reading it.

Encountered a woman who said I have to accept that my life will end if I get Corona. I receive no care and must realize that death is coming. Right now I am healthy, wholesome, feeling super good, quick in the head. Hear a little bad but otherwise there is nothing wrong with me. I like to take a bike ride and walk in the woods, but if I get sick I have to accept that my life ends. And that I get help to end my life. I have to find myself in this without feeling sad. I've had a great life. It hurt to hear this amazing woman say these words. Evil evil evil in the soul. No, that's not possible. You are a part of life. Part of my life. why should it be here then? My questions pile up. How did this happen. Which people are worthy of care?

With kind regards
